

AUTO TICKET CLASSIFICATION USING FLOW DESIGNER

PHASE 5: PROJECT_DEVELOPMENT

1. Step-by-Step Backend Configuration

Phase 5 constitutes the core development phase where physical database schema, field elements, and visual interfaces are constructed inside the ServiceNow instance.

- **Step 1:** Open the Application Navigator (All menus) and type 'Tables'. Under System Definition, select 'Tables'.
- **Step 2:** Click the 'New' button in the upper header. Enter Label: 'Incident WorkFlow'. The system automatically generates Name: 'u_incident_workflow'. Uncheck 'Create module' to manage menu positioning manually.
- **Step 3:** Open the 'Controls' tab on the Table form. Check the 'Auto-number' checkbox. Enter Prefix: 'INC', Number: '500', and Number of digits: '5'. Click 'Submit' to persist the table definition.
- **Step 4:** Under Related Links, click 'Show Form' to view the newly created default table layout.

2. Form Design & Dynamic Choice Configuration

Using ServiceNow Form Designer, the interface is laid out with fields divided across logical sections for optimal data capture.

- **Step 1:** In Form Design, add fields from the Field Types palette: Caller (Reference to sys_user), State (Choice), Category (Choice), Subcategory (Choice), Short description (String), Description (String), Assigned group (Reference to sys_user_group), and Assigned to (Reference to sys_user).
- **Step 2:** Click the gear icon on the Category field to add choice items: Network, Hardware, Access, and Performance.
- **Step 3:** Click the gear icon on the Subcategory field to add choice items: Wi-Fi, Projector, Forgot Password, and Slow Computer.

- **Step 4:** Right-click the Subcategory field on the form, select 'Configure Dictionary', click 'Advanced view', open the 'Dependent Field' tab, check 'Use dependent field', and set 'Dependent on field' to Category.
- **Step 5:** In the Choices related list, specify dependent values: Wi-Fi -> network, Projector -> hardware, Forgot Password -> access, and Slow Computer -> performance. Save and reload the form.

3. Flow Designer Automation Engine Development

The automation pipeline is built inside Workflow Studio (Flow Designer) to monitor record inserts and execute classification and notification logic.

- **Step 1:** Navigate to Process Automation > Flow Designer. Click 'New' and select 'Flow'. Name the flow: 'Auto Classify School IT Tickets', Scope: 'Global', and click 'Build flow'.
- **Step 2 (Trigger):** Under Trigger, select 'Created'. Table: 'Incident WorkFlow' (`u\_incident\_workflow`). Condition: Add criteria where 'Category' is 'empty'. Click 'Done'.
- **Step 3 (Branch 1 - Wi-Fi):** Add Flow Logic > If. Label: 'SD is wifi OR network'. Condition 1: Short description contains 'Wi-Fi'. OR Condition 2: Short description contains 'Network'. Action: Update Record -> Record: Trigger -> Incident WorkFlow Record. Set Category = 'Network' and Subcategory = 'Wi-Fi'.
- **Step 4 (Branch 2 - Projector):** Add Flow Logic > Else If. Label: 'SD is projector OR hardware'. Condition: Short description contains 'Projector'. Action: Update Record -> Set Category = 'Hardware' and Subcategory = 'Projector'.
- **Step 5 (Branch 3 - Password):** Add Flow Logic > Else If. Label: 'SD is Forgot password'. Condition: Short description contains 'Forgot password'. Action: Update Record -> Set Category = 'Access' and Subcategory = 'Forgot Password'.
- **Step 6 (Branch 4 - Performance):** Add Flow Logic > Else If. Label: 'SD is Performance'. Condition: Short description contains 'Slow computer'.

Action: Update Record -> Set Category = 'Performance' and Subcategory = 'Slow Computer'.

- **Step 7 (Email Notification):** Add Action > ServiceNow Core > Send Email. Target Record: Trigger -> Incident Record. To: Trigger -> Incident Record -> Caller -> Email (using Data Pill Picker). Subject: 'Your Request for the issue has been submitted.' Body: Professional acknowledgment message confirming ticket receipt.
- **Step 8:** Click 'Save' and then click 'Activate' in the upper right header to make the flow live.
